## Lever Regenerative Break

The battery charges when hand brakes are used. The charge is proportional to the force applied to the brake.

## Torque Sensor

The force applied on the pedal sends a signal to the motor and transforms the energy in acceleration.

## Back Pedal Proportional Regenerative Braking

Lets rider simply roll the pedals backwards to slow the bike and charge the battery.

## Specifications

250W - 750W

50km - 75km

Smart: 25 km/h  
Power: 45 km/h

## Colors

Original Copper

Neon Graphene

Urban Grey

Devil Black
